

SURGERY
PRACTICALS
(OSCE,INSTRUMENTS,
X-RAY,SPECIMEN)

OSCE

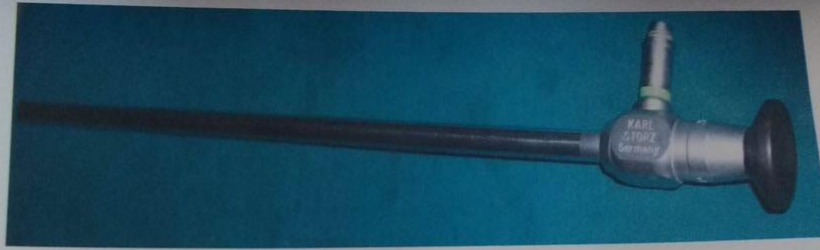

Identify the pathology.
Name its most common complication.

2

What test being performed

Name 3 lesions which can be identified by this test

1 Name the instrument

2 Name 2 surgery in which it is used

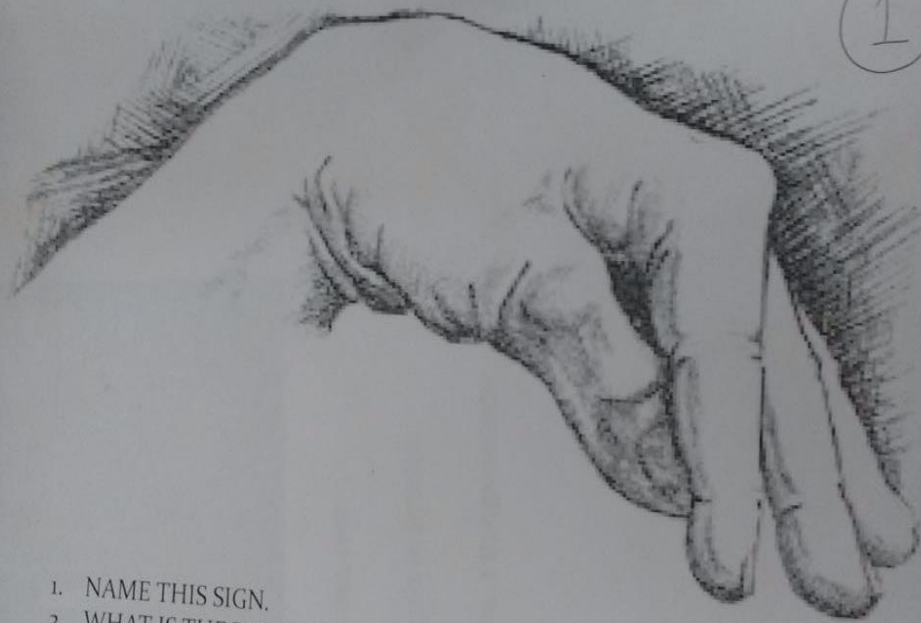

What procedure is being done

Name 2 indications for this procedure

Name 2 causes for this aspirate

1. What is the diagnosis, cause?
2. Dd of sublingual swelling
3. Management

1. NAME THIS SIGN.
2. WHAT IS THE TREATMENT?

Give a differential diagnosis

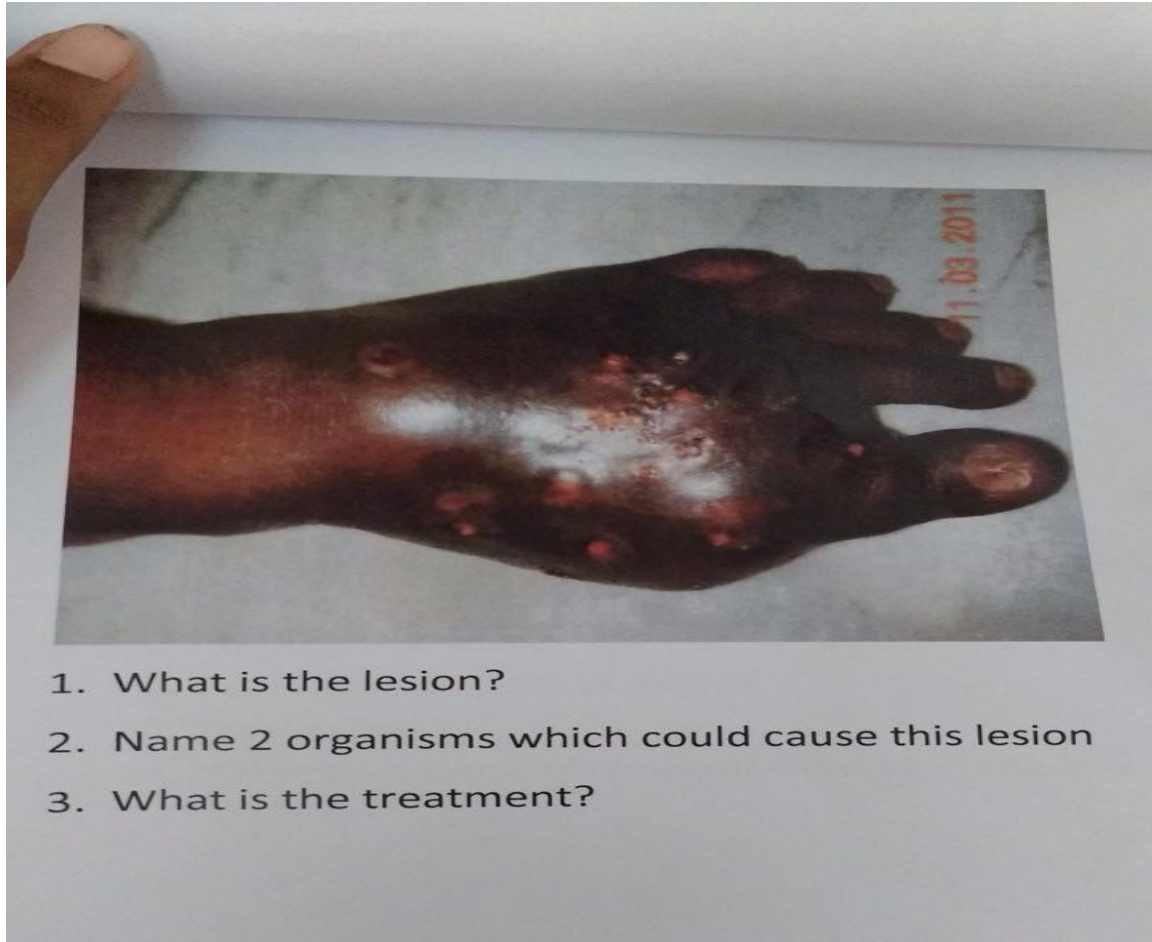

Which cutaneous lesion will help in diagnosis

1. Name the instrument
2. Name the methods to create pneumoperitoneum.
3. What is the ideal pressure in pneumoperitoneum.?
4. How to sterilise these instruments?

1. Identify the lesion
2. Pathological types of polyps
3. Treatment
4. Name two syndromes associated with the lesion

1. What is the lesion?
2. Name 2 organisms which could cause this lesion
3. What is the treatment?

1. Identify the lesion
2. Enumerate the grading
3. What is the treatment ?
4. Cause of sinistral portal hypertension

- 1.Prevention of this complication
- 2.What can it lead to?
- 3.Management of this gross lymphoedema?

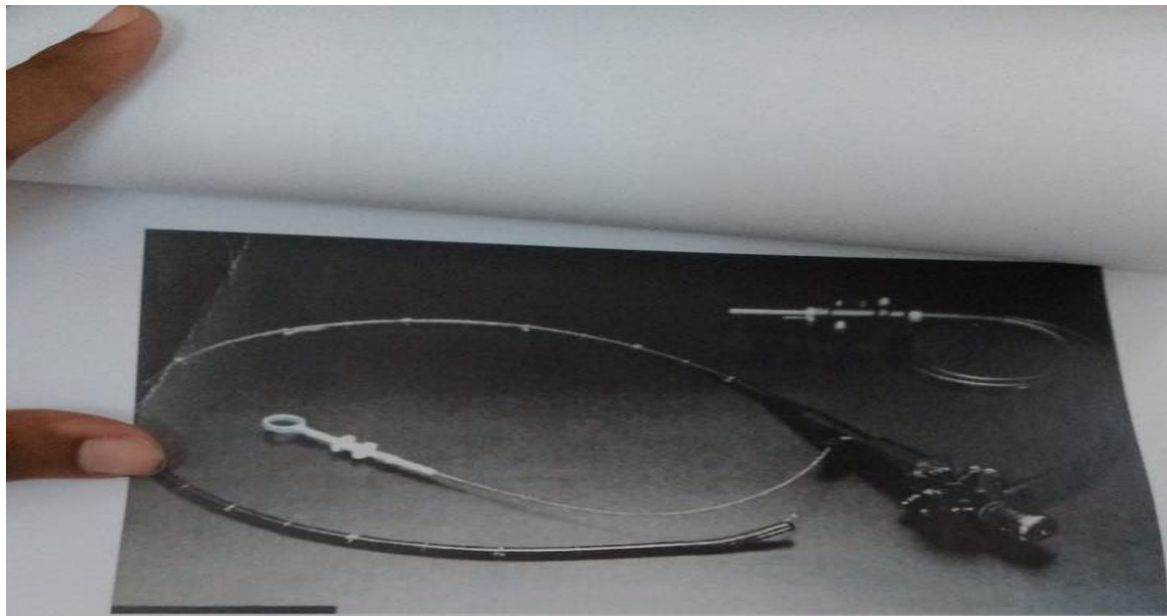

1. Identify the lesion
2. Name three premalignant lesion
3. Mention indication for sentinel lymph node biopsy

What is seen

What is the appearance in plain X- ray abdomen?

1. Name the instrument
2. Name two therapeutic procedures done with it
3. What are the complications that can occur ?

What is seen

How do you prevent it

What is the management now

What lesion is it?

Name 3 types

1. What is the diagnosis?
2. Name two procedures for repair?
3. Complications

Name the triangle associated with this organ

What organs form sides of the triangle

Name a content of the triangle

What do you see

How can you prevent it

What is the treatment

What is this test

What is the indication

Name the 3 things needed

What is the operative finding

Is this surgery elective or emergency surgery

Name the retractor placed on the liver

Identify the artery

What is this incision and name the procedure done

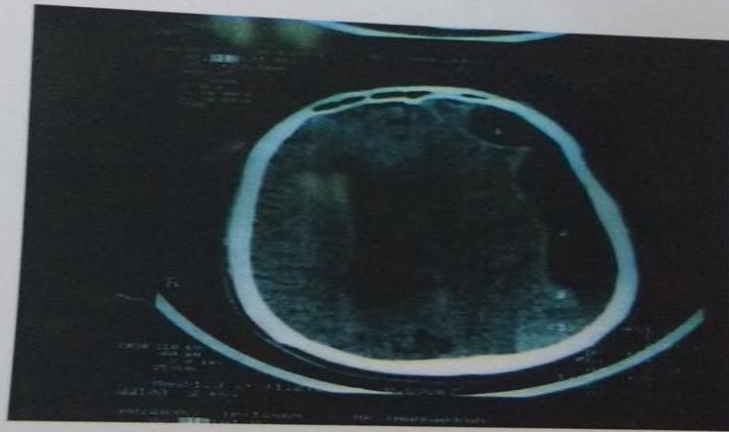

What is its advantage

What is this lesion

What is the common symptom

What is the treatment

What is the part of body imaged

Name 2 surgical indications for this test

Name one finding in this test

What is the treatment

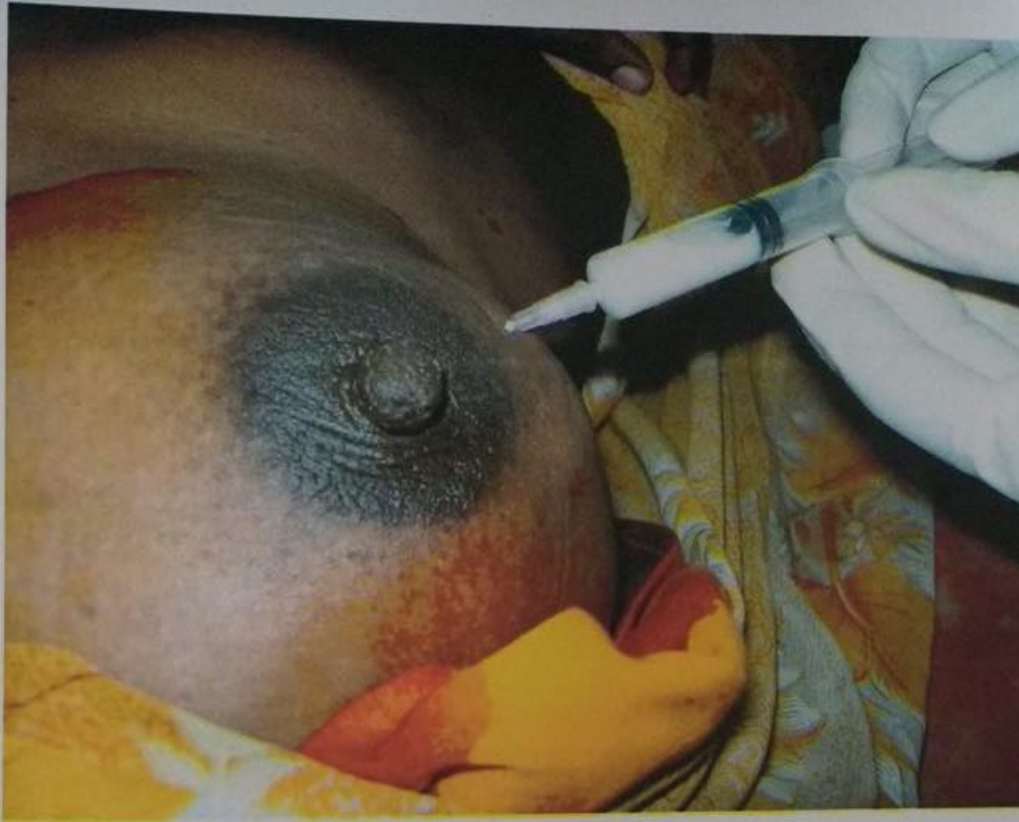

Identify organ imaged

What is the test done

Name 2 isotopes used for this test

- 1 Identify organ imaged and the test done
- 2 What is the finding?
- 3 Name 2 reasons for the finding

What is aspirated

What is the lesion

What is the investigation of choice

When should we intervene

What is the treatment

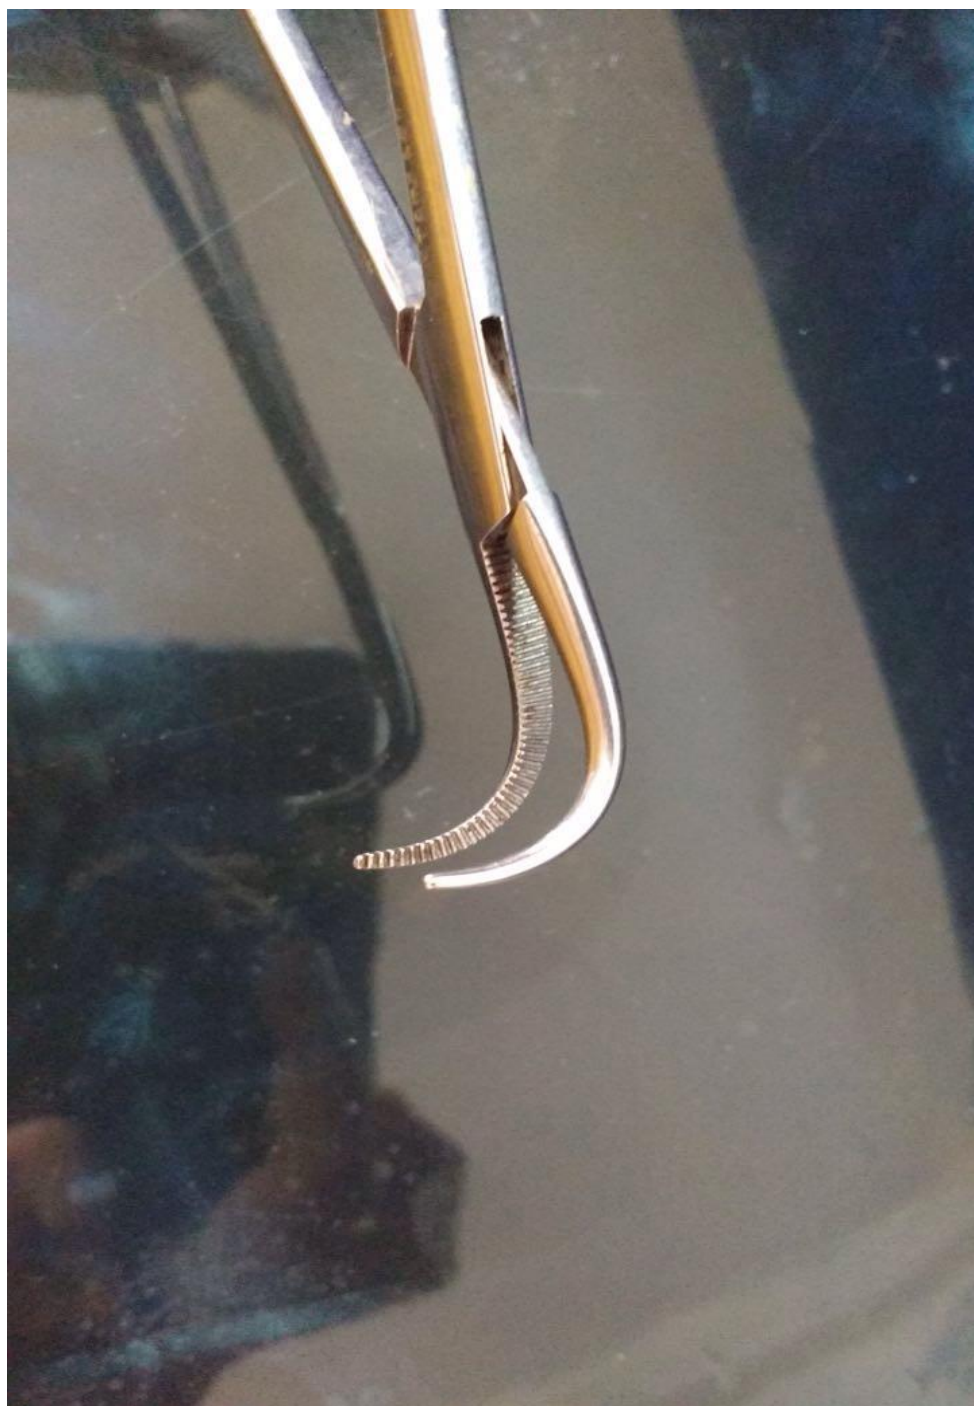

INSTRUMENTS

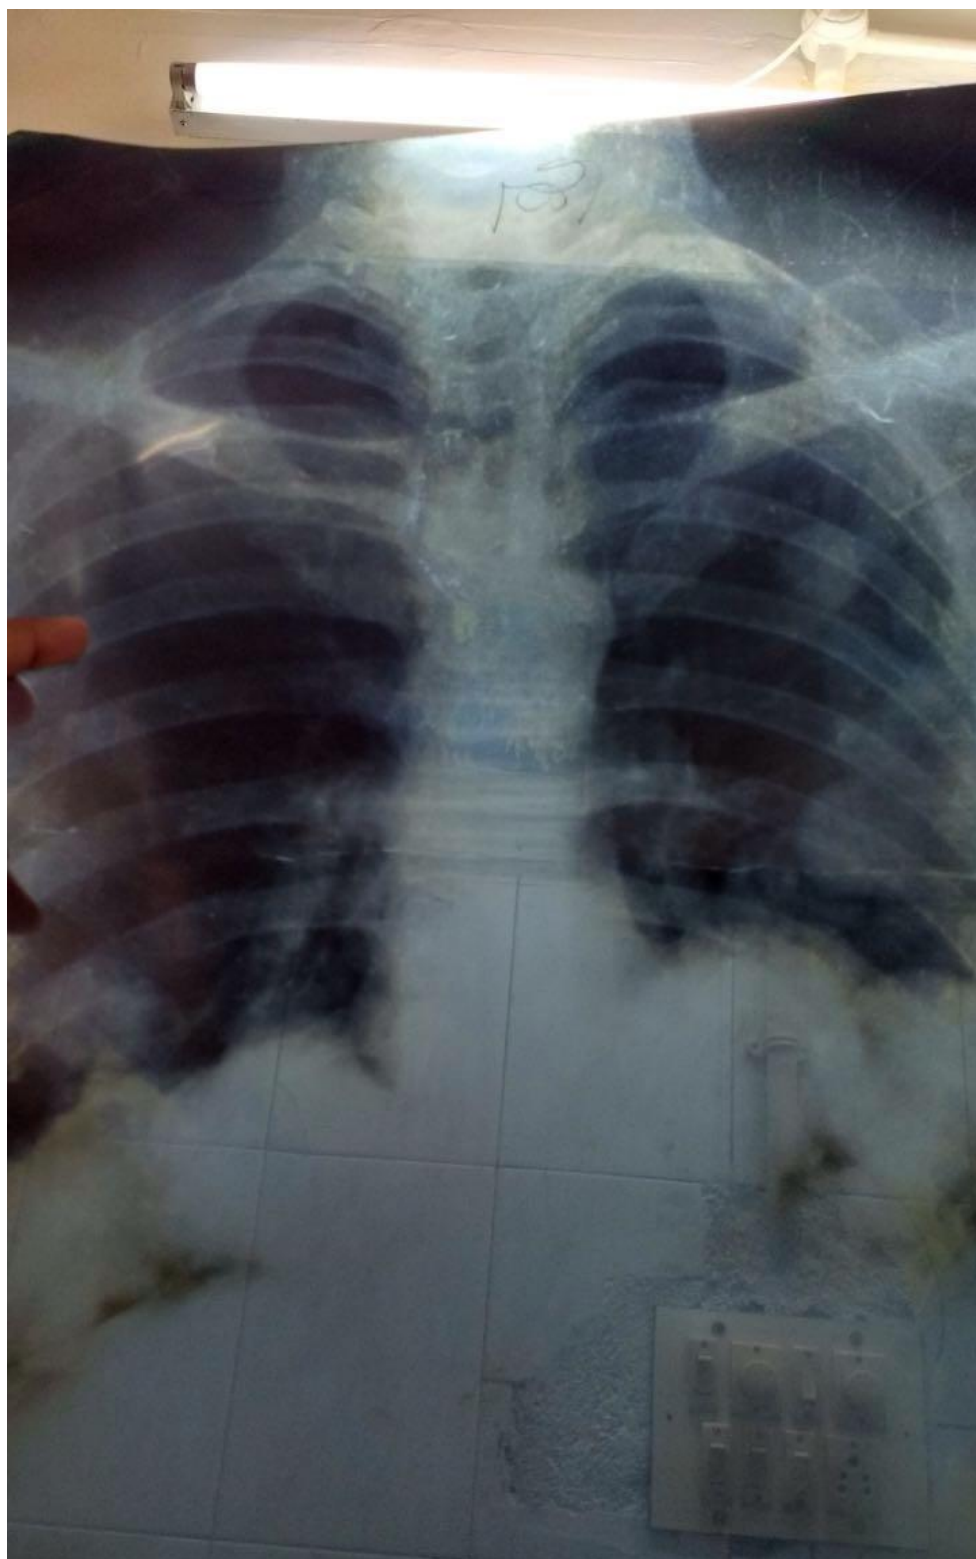

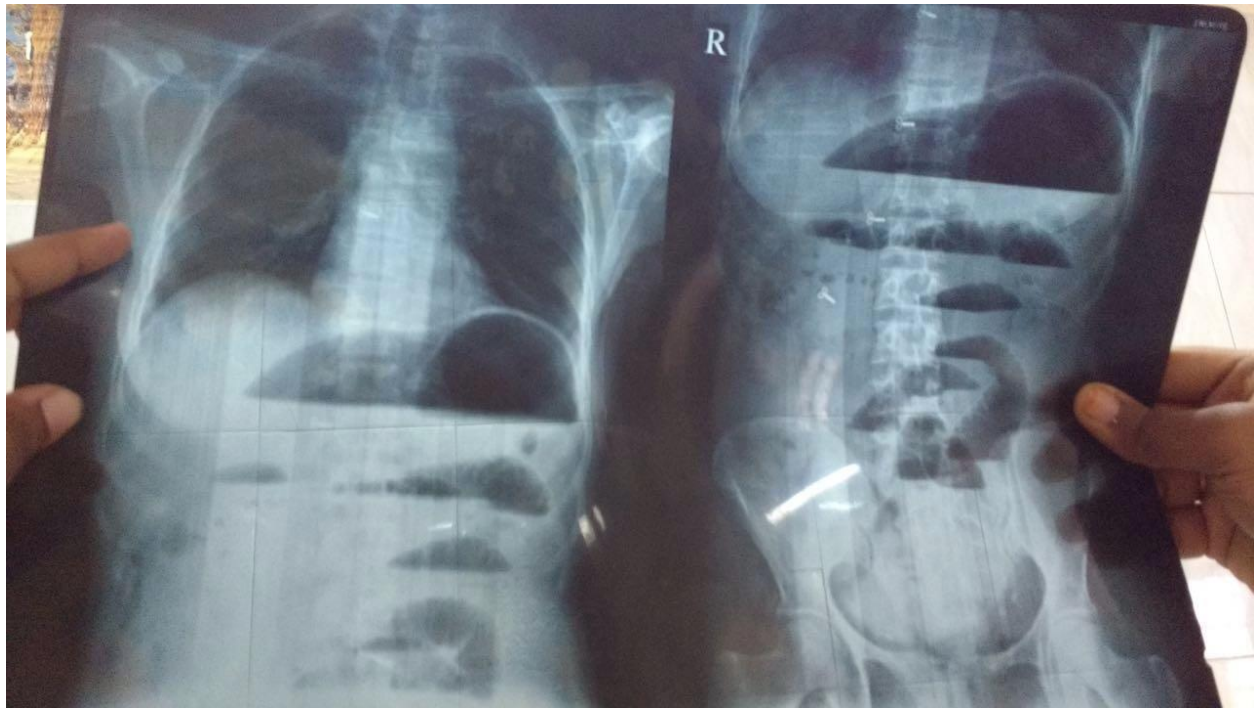

X-RAY

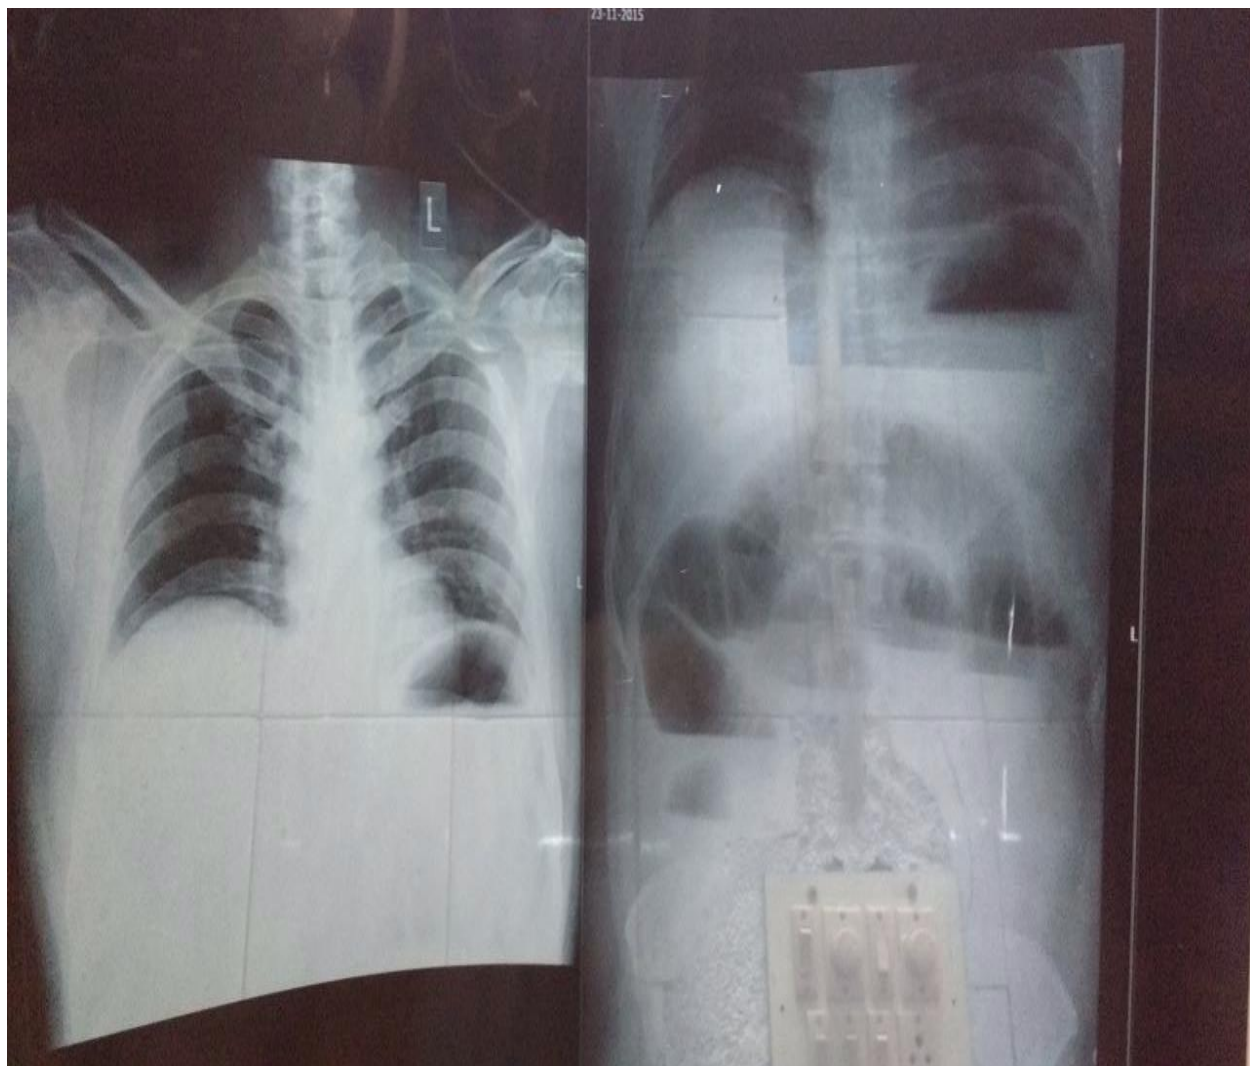

SPECIMEN
